Professional Summary

Fullstack Developer with 3+ years of experience building production APIs, payment gateways, and blockchain-integrated fintech systems on remote teams. Specialized in Node.js, NestJS, React.js, and Vue.js, with hands-on experience in multi-chain Web3 across Solana, Polygon, TRON, and EVM networks. Recognized for taking end-to-end ownership, from architecture to deployment, and for delivering critical integrations independently under tight deadlines. Open to new remote opportunities in Fullstack, Backend, or Web3 roles.

Key Skills

Node.js / NestJS · Web3 & Blockchain Integration · Crypto Payment Gateways · React.js / Vue.js · Webhooks · REST API Design · AWS Lambda & Serverless · Fintech APIs (Stripe, Conduit, Rain)

Work Experience

Backend Developer

November 2025 - June 2026

Coral Finance | Panama (Remote)

- Led the emergency migration from the deprecated Fern API to Conduit and Rain over 5+ weeks, independently integrating both financial APIs from scratch and unblocking the team when no other engineer could complete the integration within the set deadline.
- Owned all technical communication with Rain's engineering team in English via Slack, sending queries, clarifying integration requirements, and coordinating the API setup end to end.
- Designed backend services in Node.js and Express for a crypto platform handling USDT/USDC transactions on Solana and Polygon (EVM), making key infrastructure decisions autonomously.
- Implemented webhook systems for real-time on-chain event processing; maintained lean infrastructure on Vercel and Supabase within a team of 23 engineers.

Fullstack Developer

December 2024 - October 2025

Flexbit | Panama (Remote)

- Built the crypto payment gateway for Smart+ (Mexico) from scratch using Node.js and TronWeb: payment iframe, backend transaction logic, and blockchain wallet integration - the system processed 500-2,000 daily transactions on TRON and EVM networks.
- Served as the main technical point of contact for the Smart+ team, coordinating integration requirements independently.
- Integrated DIDIT's KYC into the registration flow, enabling access for 1,000+ users and reducing fraudulent signup risk.
- Deployed on AWS Lambda and S3 for serverless infrastructure, alongside VPS environments configured with NGINX and PM2 within a team of 46 engineers.

Fullstack Developer

May 2024 - October 2024

BTRazer | Panama (Remote)

- Designed and delivered an admin dashboard from scratch with React.js for product traceability management, statistics visualization, and supply chain tracking for wine industry clients.
- Refactored a legacy Node.js/Express backend, extending functionality from basic traceability to a full platform with authentication middleware, data tables, and analytics endpoints.

Fullstack Developer

August 2023 - January 2024

Justo A Tiempo | Spain (Remote)

- Refactored a real-time logistics tracking system for 150+ drivers and customers, resolving critical bugs affecting delivery operations reliability.
- Integrated Stripe and PayPal payment gateways into the logistics platform to support online payments.
- Built interfaces with Vue.js 2 and Vuex, and REST APIs with Node.js, Express, and Firebase; deployed and maintained the system on VPS infrastructure.

Backend Developer

January 2023 - July 2023

DevITM | Mexico (Remote)

- Integrated the Stripe payment gateway into a production e-commerce platform, enabling secure transactions with modular architecture and centralized error handling.
- Built REST APIs with Node.js and Express with full Swagger documentation within a team of 4+ engineers.

Personal Projects

CryptoShop (January 2026 - February 2026)

github.com/peLuis123

Fullstack e-commerce platform with TRX payments, built solo in under 2 weeks: React.js frontend with 2 role-based dashboards (customer/admin), Node.js backend with JWT, on-chain confirmation on TRON testnet, and real-time updates via Socket.io.

CryptoDash (January 2026)

luisdev21.netlify.app

Crypto portfolio tracker with real-time data from 2,500+ assets via the CoinGecko API, interactive charts, CSV export, and dark/light mode. Built with React 18, Vite, Tailwind CSS, and React Router 7.

Technical Skills

Languages: JavaScript (ES6+), TypeScript

Frontend: React.js, Vue.js 2/3, Vuex, Tailwind CSS, Material UI, Vuetify, HTML5, CSS3

Backend: Node.js, Express.js, NestJS, REST APIs, Webhooks, JWT, Socket.io

Blockchain & Web3: Web3.js, Ethers.js, TronWeb, Solana, Polygon, TRON, EVM, USDT, USDC

Databases: MongoDB, PostgreSQL, MySQL, Redis, Supabase, Firebase

Cloud & DevOps: AWS Lambda, AWS S3, Vercel, NGINX, PM2, VPS (CentOS), Docker

Payments & Fintech: Stripe, PayPal, Crypto Payment Gateways, Conduit, Rain API

Architecture: Clean Architecture, MVC, SOLID, Design Patterns

Tools: Git, GitHub, Swagger, Postman, Jest, Agile/Scrum

Languages Spoken: Spanish (Native) · English (Professional working proficiency - daily async communication with international teams)

Certifications

Fullstack Diploma (144 certified hours)

Mundos E | August 2023

Software Development Bootcamp (35 certified hours)

Krowdy Academy | August 1 - September 12, 2022

Education

Professional Degree in Systems and Computer Engineering

Universidad Nacional de Moquegua | Moquegua, Peru - 2016 - 2022
