Professional Summary

Fullstack Developer with 3+ years of experience building production-grade APIs, payment gateways, and blockchain-integrated fintech systems across remote teams. Specialized in Node.js, NestJS, React.js, and Vue.js with hands-on Web3 experience across Solana, Polygon, TRON, and EVM networks. Known for taking end-to-end ownership – from architecture to deployment – and independently shipping critical integrations under tight timelines in lean teams. Open to new remote opportunities in Fullstack, Backend, or Web3 roles.

Core Competencies

Node.js / NestJS · Web3 & Blockchain Integration · Crypto Payment Gateways · React.js /
Vue.js
Webhook Engineering · RESTful API Design · AWS Lambda & Serverless · Fintech APIs
(Stripe, Conduit, Rain)

Professional Experience

Backend Developer

November 2025 – Present

Coral Finance | Panama (Remote)

- Led emergency migration from deprecated Fern to Conduit and Rain APIs over 5+ weeks, independently integrating both financial APIs from scratch and unblocking the entire team when no other engineer could complete the integration within the timeline.
- Owned all technical communication with the Rain engineering team in English via Slack – submitting queries, clarifying integration requirements, and coordinating API setup end-to-end.
- Architected backend services in Node.js and Express for a crypto finance platform handling USDT/USDC transactions across Solana and Polygon (EVM), making key infrastructure decisions independently.
- Engineered webhook systems for real-time on-chain event processing; maintained lean infrastructure on Vercel and Supabase within a team of 2–3 engineers.

Fullstack Developer

December 2024 – October 2025

Flexbit | Panama (Remote)

- Built the crypto payment gateway for Smart+ (Mexico) from scratch using Node.js and TronWeb: payment iframe, backend transaction logic, and blockchain wallet integration – system processed 500–2,000 daily transactions across TRON and EVM networks.
- Served as the primary technical point of contact with the Smart+ client team, coordinating integration requirements independently via direct channels.
- Integrated DIDIT KYC into the onboarding pipeline, enabling compliant access for 1,000+ users and reducing fraudulent registration risk.
- Deployed on AWS Lambda and S3 for serverless infrastructure, alongside VPS environments configured with NGINX and PM2; built RESTful APIs with Node.js and NestJS within a cross-functional team of 4–6 engineers.

Fullstack Developer

May 2024 – October 2024

BTRazer | Panama (Remote)

- Architected and shipped an admin dashboard from scratch using React.js, enabling product traceability management, statistics visualization, and supply chain tracking for wine and consumer goods clients.
- Refactored a legacy Node.js/Express backend, extending functionality from basic traceability to a full-featured platform with authentication middleware, data tables, and analytics endpoints.

- Built RESTful APIs with Express and MongoDB to support end-to-end product lifecycle tracking within a lean team of 2–3 engineers.

Fullstack Developer

August 2023 – January 2024

Justo A Tiempo / Spain (Remote)

- Refactored a real-time logistics tracking system serving 150+ drivers and end customers, resolving critical bugs that impacted logistics operations reliability.
- Integrated Stripe and PayPal payment gateways into the logistics platform to support online payment processing.
- Built frontend interfaces with Vue.js 2 and Vuex, and RESTful APIs with Node.js, Express, and Firebase; deployed and maintained the system on VPS infrastructure.

Backend Developer

January 2023 – July 2023

DevITM / Mexico (Remote)

- Integrated Stripe payment gateway into a production e-commerce platform, enabling secure online transactions and streamlining the end-to-end checkout experience.
- Built RESTful APIs with Node.js and Express using modular architecture, centralized error handling, and full Swagger documentation.
- Configured and deployed backend infrastructure on CentOS VPS with NGINX and PM2 within a team of 4+ engineers.

Personal Projects

CryptoShop (*January 2026 – February 2026*) github.com/peLuis123

Shipped a full-stack crypto e-commerce platform solo in under 2 weeks: React.js frontend with 2 role-based dashboards (client/admin), Node.js backend with JWT authentication, TRX on-chain order confirmation on TRON testnet, and real-time updates via Socket.io.

CryptoDash (*January 2026*) luisdev21.netlify.app

Crypto portfolio tracker with real-time data for 2,500+ assets via CoinGecko API, interactive charts, CSV export, and dark/light mode. Built solo with React 18, Vite, Tailwind CSS, and React Router 7.

Education

Bachelor of Science in Systems and Computer Engineering

Universidad Nacional de Moquegua | Moquegua, Peru

2016 – 2022

Software Development Bootcamp

Krowdy | Peru

September 2022 – November 2022

Technical Skills

Languages: JavaScript (ES6+), TypeScript

Frontend: React.js, Vue.js 2/3, Vuex, Tailwind CSS, HTML5, CSS3

Backend: Node.js, Express.js, NestJS, RESTful APIs, Webhooks, JWT, Socket.io

Blockchain & Web3: Web3.js, Ethers.js, TronWeb, Solana, Polygon, TRON, EVM, USDT, USDC

Databases: MongoDB, MySQL, Redis, Supabase, Firebase

Cloud & DevOps: AWS Lambda, AWS S3, Vercel, NGINX, PM2, VPS (CentOS), Docker

Payments & Finance: Stripe, PayPal, Crypto Payment Gateways, Conduit, Rain API

Architecture & Patterns: Clean Architecture, MVC, SOLID principles, Design Patterns

Tools: Git, GitHub, Swagger, Postman, Jest, Agile/Scrum

Languages: Spanish (Native) · English (Professional working proficiency – reading & writing)
